

Carlos' Big Adventure with the Eco-Flow Water Monitoring System!

This is Carlos, a homeowner! He is concerned about climate change and he wants to make a difference in his home.

Carlos wants to save money on his water bill and be more mindful about his water consumption.

Carlos uses Eco-Flow, a water monitoring system to receive specific data about his home water consumption.

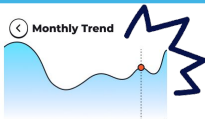

The Eco-Flow sensors are cost-efficient and very convenient to install! Carlos can place them on his water consuming appliances. The sensors collect data which Carlos can view with the app.

You saved 1000 litres this month!

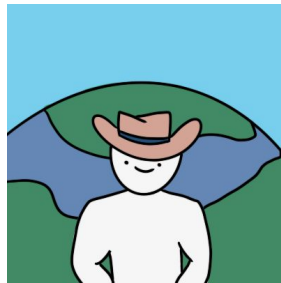

- Here are some ways you could improve:
- Have shorter showers (10 mins)
 - Install a low-flow shower head
 - Use water saving containers outdoors
 - Install a rain barrel outside
 - Use cold water for some of your kitchen tasks

In the Eco-Flow app, Carlos can compete with friends on the leaderboard, look at monthly water trends and receive suggestions to improve!

Carlos is able to reduce his water usage, and save on his water bills! Carlos is also able to earn in-app points, so he can track his progress with water conservation.

Carlos feels empowered because he can help the environment through his choices, while saving money.

Eco-Flow has a broader impact on Canadian homeowners, helping them be more respectful toward their water usage.
